

FIFRA 24 C

Guidelines

The following information is typically needed to evaluate proposed special local need, 24(c) registration requests:

1. A completed EPA Application/ Notification form (EPA Form 8570-25).
2. A copy of the proposed supplemental labeling. For new products, a copy of the complete proposed labeling.
3. A copy of the current EPA-approved FIFRA Section 3 labeling.
4. Describe the special local need – the existing or imminent pest problem within Wyoming for which there is no appropriate federally registered pesticide product available. Include requests for the product from user groups that documents the need for the pesticide and the intended use of the product if the registration is approved.
5. Technical data sheets, an MSDS, or other information to assess potential health hazards, including recognized chronic effects. Additional safety data may be needed to determine whether the pesticide poses less risk than EPA-registered alternatives.
6. Documentation of a tolerance or exemption from tolerance if necessary for the proposed use (e.g. a copy of the Federal Register notification).
7. Residue data to insure that residues from the proposed use pattern or rates do not exceed established tolerances.
8. Efficacy data to demonstrate that the pesticide is more effective than EPA registered alternatives or to insure that claims made for the pesticide are warranted. If data are not available, expert evaluations may be acceptable.
9. A summary of environmental information, including toxicity to fish and wildlife, phytotoxicity, degradation mechanisms, persistence, and mobility. Information from nearby areas will be considered if Wyoming information is not available.
10. Information regarding status of any Re-registration Decision, Special Review, or data-call-in by EPA including a summary of data gaps identified and any plans or studies in progress to support continued registration.
11. Documentation for why alternative products are not available in sufficient quantity, if applicable.

12. For new products, a certified statement of formula.
13. For new products, any additional information that might be useful in making a “no unreasonable adverse effects” determination.
14. Send applications to:
Wyoming Department of Agriculture
Technical Services Division
24 C Product Registrations
2219 Carey Ave
Cheyenne, WY 82001-0100

When a complete application package is received, we will document that a special local need exists. Review of application generally takes about two weeks. Additional information may be requested of the applicant by the reviewers before a final decision is made. We will notify you of our decision after the review is completed. If registration is approved, we will assign an SLN number so that you may submit an electronic copy of the final label to pcross@state.wy.us or showe@state.wy.us . We will notify U.S. EPA of the registration approval. EPA has 90 days to disapprove any SLN approved by the State.

If the product is not registered in the State of Wyoming, it shall be registered before the SLN goes into effect. Registration application can be found on the Wyoming Department of Agriculture web-site.
